EMPLOYEE CLOCK-IN SOLUTIONS

ANY DEVICE, ANYWHERE

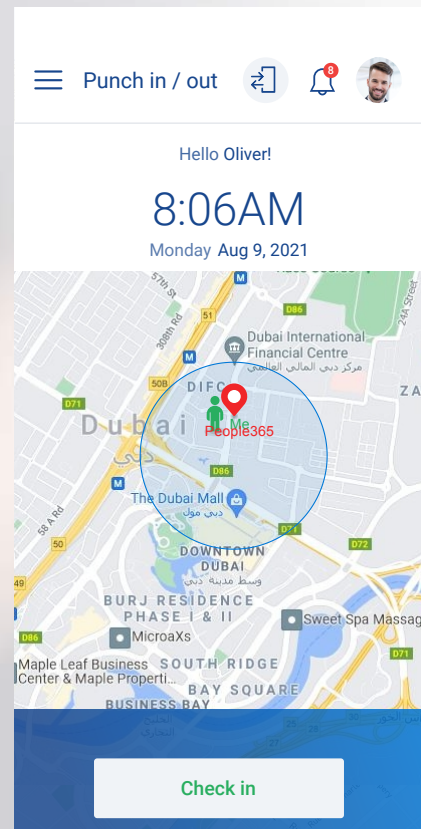

Due to COVID-19 pandemic, organizations have been adopting different solutions and policies to protect their employees and to offer both flexibility and safety. It is now more important than ever to make sure that you first adopt clock-in solutions suitable for remote, hybrid, as well as in-office work models.

At People365, we are here to help! Through People365 employee-centric web and mobile application, your employees can clock in/out, request leaves, and execute other employee self-service features. Employees working from remote locations and those working in a central office will be able to clock in/out safely with our touchless solutions while your organization maintains policies as well as rigid and flexible schedules.

With another COVID-19 wave, you definitely need People365 clock-in solutions! Enable your employees to clock in and out when they start and end each shift, based on their assigned schedule and location and without the necessity of touching a screen or even standing in the queue next to each other to log their attendance.

Mobile Clock-in

People365 mobility solution allows your employees to clock-in using their personal phones. Whether on IOS or Android, your people will be able to clock in while working from home through active directory log-in.

Geolocation Clock-in

When an employee hits the office or site, the Mobility app uses their mobile location services to detect the closest office and checks if he is inside a saved radius. When outside the radius, the user would not be able to clock-in.

Site name

People365

During the clock-in operation, the application recognizes the user, takes a picture of the employee, validates if he can check in to target location or not, saves its clock-in time, matches it with his schedule and policies and kicks off his shift.

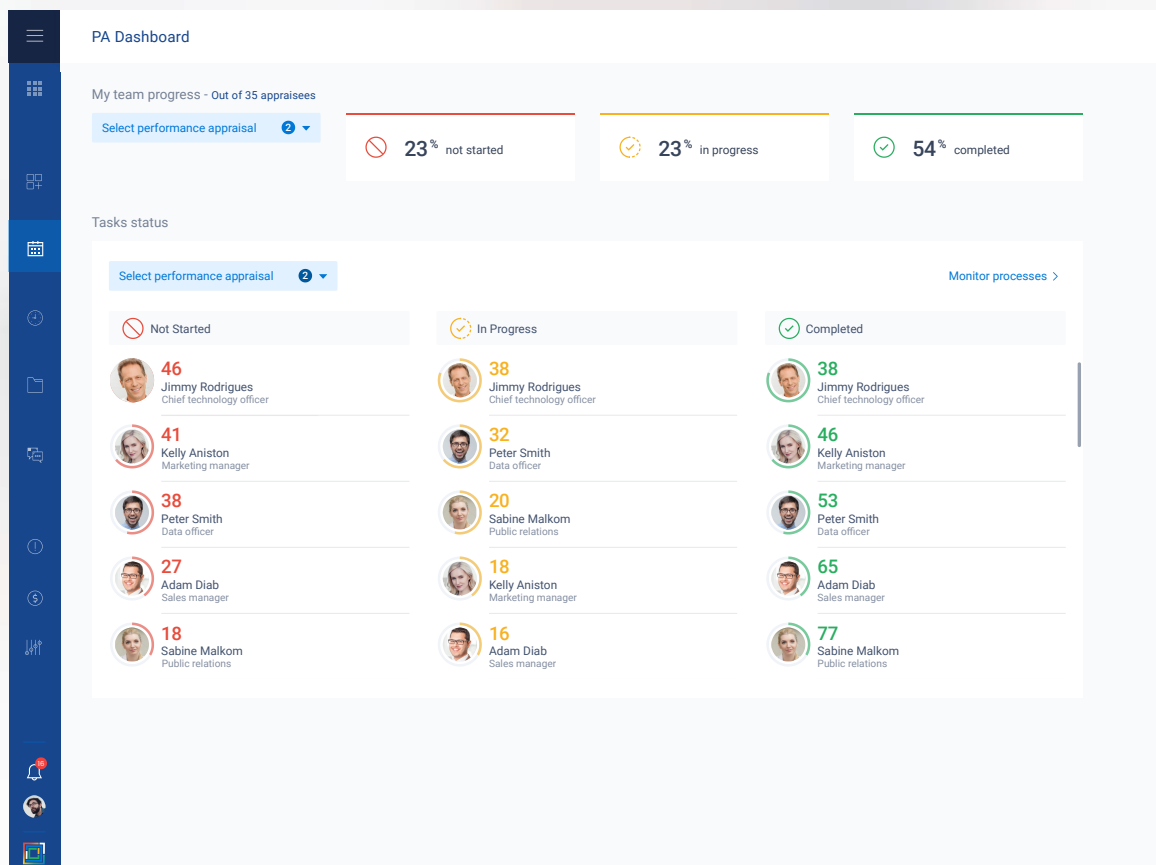

Employees can view their clock-in and out entries at any time.

QR Code Clock-in

Employees can clock in to any of the organization's departments from a tablet or a mobile through a touchless process, and updates will be available regarding their clock in time, location and availability.

Would you like to keep track on when and where your employees clock in or out of work from any device and location, in real time? Sure you would! Our solution allows managers to monitor their teams' daily attendance and work locations.

The best and only way to eliminate human error and time theft is by adopting a clock-in solution to handle all attendance entries and leaves. People365 Mobility app is accurate and fully automated, making it possible for users to get fast, real-time reports. Also, it is a plug and play solution that can work with People365 and any other time & attendance solution, easy to implement and does not require any training.

Regardless how many employees there are in your company, People365 is the solution you need for tracking and managing time from anywhere and any device. For more accuracy, supervisors and employees can add missed punches to ensure the punch record is correct.

No matter your industry, using People365 Mobility solution will not only save you from the trouble of having to do the attendance manually, but will also help you save a lot of labor costs due to errors.
